

Calibration 6

Methods

- Changes compared to calibration 5:
 - Increased the prestretch values bounds to 0.6 - 1.4

The Python scripts used for calibration can be found in folder: *Python scripts - Calibration 6

Results

The calibration results can be found in: Results calibration 6.xlsx

- Stopped MAstudy_Calibration11, since the calibrated prestretch and Young's modulus values result in simulations where the joint is pushed apart entirely.
- The increase of the bounds were too large.
